mass m_1 towards right by kx_2 and it

is stretched by x_1 (towards right) it will

exert a force of kx_1 towards left on

mass m_2 . Similarly assuming $m_2 > m_1$, the

spring get compressed by an amount x_2

and exert tensile force of kx_2 . One

may note that in both cases, free body

diagram remain unchanged., The absorption

of electromagnetic radiation by water

depends on the state of the water.. The

absorption in the gas phase occurs in three

regions of the spectrum. Rotational

transitions are responsible for absorption in

the microwave and far-infrared, vibrational

transitions in the mid-infrared and

near-infrared. Vibrational bands have

rotational fine structure., When air molecules

are set to vibrate, the ear perceives the

variations in pressure as sound

(OTM/Driscoll). The vibrations are converted

into mechanical energy by the middle ear,

subsequently moving microscopic hairs in

the inner ear, which in turn convert the sound

waves into nerve impulses., 2 Chapter 1

reading of its table of contents. It is a book of perennial interest and many-sided usefulness for self-culture, self-, Request: to those who have found this material useful, please make an effort to let at least two people know about my web site, so that we can start a chain reaction of ever more people that will be informed of this site.
