Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this., The final paper of the three was "Non-verbal Reasoning". This was my favourite because, to this day, I love puzzles and these felt little more than that. I can remember my first priority being to try to leave the class first, which seemed far more important than using any remaining time to check my answers, but I still managed to scrape through somehow.
